

# **Quality Feedback: A Key Component to Facilitating General Practice / Primary Care Multi- disciplinary Systems Integration**

**CENTRAL VICTORIAN HEALTH ALLIANCE**

# Aim....

- To improve health outcomes for patients through enhanced feedback systems.

# Objectives....

- To improve the frequency and quality of feedback to GPs
- To develop quality feedback systems
- To improve relationships between GPs and other primary care practitioners.

# Key Activities....

- Develop inter-agency agreements about how, when and what to feedback:
  - The *CVHA Feedback Protocols*
  - “Quality” indicators or standards
- Develop & trial a functional feedback system eg
  - A Feedback Pathway
  - Communication systems
  - A Feedback Form

# How?...

- Pre & post consultations:
  - General Practices in Mount Alexander Shire
  - District Nurses, HACCC Service and ACAS
  - 2 DGP Consumer Reference groups
- Information sessions for participating staff
- 2 month trial - 122 GP feedbacks sent
- Evaluation: Functional? Quality?
- Refine Protocols, Pathways & tools

# Feedback definition...

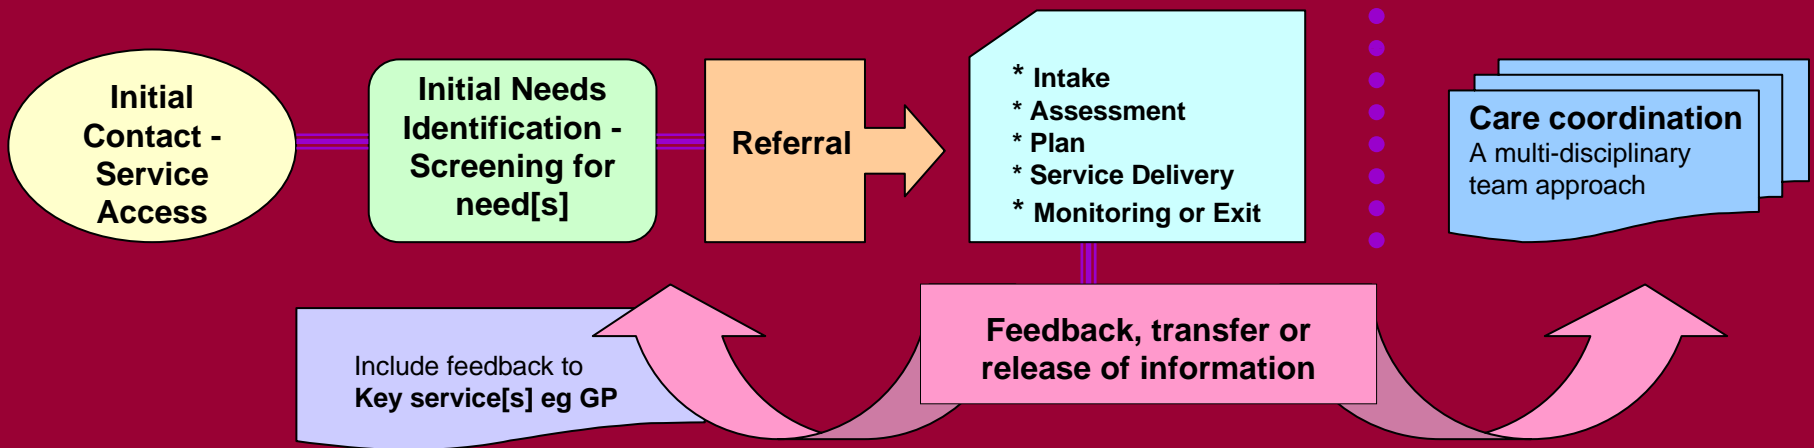

Feedback is an information exchange that is in response to any **new** or **changed** personal, health and care information.

Feedback is any exchange of shareable consumer information from across the spectrum of care that is not a referral and not multidisciplinary care plan.

# Feedback includes...

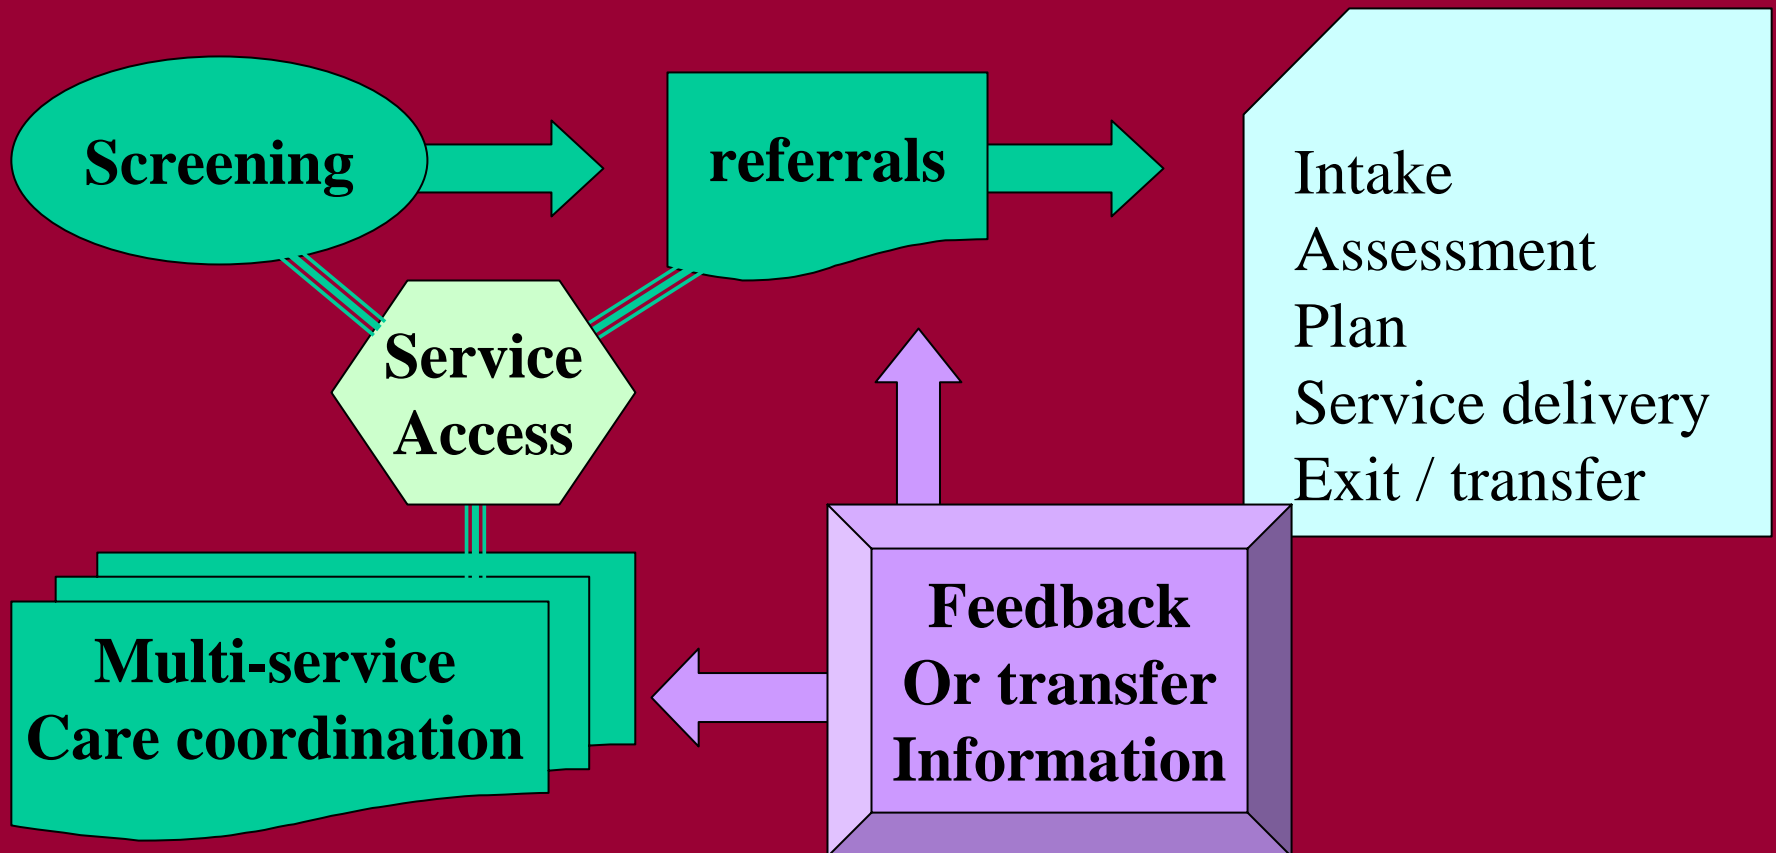

- New or changed consumer demographic information
- New or changed risks or alert information
- New or changed screening outcomes
- Referral and intake outcomes
- Assessments and planned care outcomes
- Exit or discharge or transfer information

# Service Coordination Model

The common feature to these processes is **information**: consumer **information exchange** or service and health / care **information provision**

# Key components of inter-agency activities

# Quality feedback practices = providing meaningful feedback ...

- Send as soon as possible, depending on urgency
  - If **urgent phone** and talk directly to the Service Provider
  - Otherwise within 7 days.
- Tailor the feedback information (content) to the needs of the receiving service
- Ensure legible, jargon free information
- Keep details succinct
- Keep a consistent format e.g. CVHA Feedback Form
  - Problem/s; goal/s; goal date/s; action/s; additional info
- Build on information over time

# The CVHA Feedback Form

- Promotes feedback of referral and / or **assessment** outcomes
- Can be initiated at referral or by Intake or the **Assessment Service**
- Has Privacy checkboxes
- Can be used to exchange **information required for multidisciplinary care planning**
- Has data that fits with:
  - ❖ **DHS Service Coordination Care Plan**
  - ❖ Existing GP Feedback Forms
  - ❖ Existing referral feedback forms and MDS requirements.

The image shows a feedback form from the Central Victorian Health Alliance. The form is titled 'Central Victorian Health Alliance Feedback Form' and includes a CVHA logo. It is divided into several sections for data entry:

- Consumer Information:** Fields for Consumer Name, Address, Date of Birth, and Gender.
- Feedback To:** Fields for Title, Agency, Key Worker, Title, Agency, Phone Number, Fax number, and Feedback Request Date.
- Referral Outcome Section:** A section with checkboxes for 'Referral Outcome Section' and 'Assessment Outcome Section'. It includes questions about whether the referral has been accepted, if the consumer is on a waiting list, if an appointment date has been given, and if the consumer attended/accepted the service. It also has checkboxes for 'Insufficient information sent', 'Consumer ineligible for service', 'Consumer declined service', and 'Other'.
- Assessed Issue/Problem:** A section for 'Assessed issue/s or problem/s found at this initial assessment' with checkboxes for 'Or no assessment'.
- Planned Goals:** A table with columns for 'Planned Goal/s (if relevant)', 'Target date/s', and 'Planned Action (include intervention type, frequency, start and review dates)'. It has two rows for goals.
- Other details:** Fields for 'Other details', 'A new referral's result from the assessment', 'Additional assessment information attached', 'Referral Summary attached', and 'Other attachments'.
- Feedback From:** Fields for Title, Agency, Phone Number, Fax number, and Date Feedback Sent.

At the bottom, it says 'Page 1 of 1' and 'Copyright © 2008'.

# What did they like? ...

## The GPs liked

- Being kept informed
- An “easy to scan” form; “only takes a minute”
- Form that has “Got the right headings”:
  - Problem; goal & date; actions
- Details kept succinct – “not reading an essay”
- Able to use details “at the patient’s next visit”
- Tool for care-plan teams.

## Service Providers liked

- 1 system to inform all
- Pre-formatted – didn’t have to construct a letter
- Brief but individualized
- “Easy to fill in” form
- Not having to chase GPs for non-urgent feedback
- Being informed by others
- Written copy of message – not relying on others.

# Sustainability ?...

## For GPs

- **Don't over feedback** – condense processes
- Don't send “glib” info for the sake of filling in a form
- Feedback **assessment outcomes, changes, or when action** is needed
- **Link** to GP care systems
- Review and support the Practice's internal processes for receiving & giving feedback.

## For Service Providers

- Keep feedback **systems** as **uniform** as possible
- **Allow time for training**
  - Focus on **quality** practices– not the form
  - Include discussion on local **implementation**
- Review or develop Policies and Procedures for receiving and sending feedback – met Protocols
- Build on existing systems

# Since the trial....

- All services involved in the trial continue to use the CVHA Feedback form and process to inform GPs of referral and initial assessment outcomes.
- One participating Service Provider informs other service providers and GPs involved in a persons care of any relevant changes to care at any time.
- Other Service Providers in the CVHA catchment are reviewing and changing their Feedback Processes to align with the CVHA Protocols. This is a slow incremental process.

# General Practice / Primary Care Agencies Systems Integration Framework: **A Patient Centred Approach**

**Premise:** Goal is to improve patient/consumer health outcomes

**Terminology:** \*General Practice not just GPs \*Systems integration not just engagement  
\*Respect language differences \*Multi-disciplinary care - not just care planning

## ***Patient Centred Approach***

\*Common Goals \*Enablers & Barriers  
\*Commonalities and Priorities

## **Systems**

\*Micro - individual patient treatment systems  
\*Intra & Inter agency systems \*Macro systems

## ***Identifying and Understanding of the Benefits for the Patient at a:***

\*Micro/patient treatment level; \*Intra agency/practice level; \*Inter agency level; \* Macro level

## ***Ease Of Information Flow***

\*Easy, quick, meaningfully patient /service info flow  
\* Supported or impacted on by IM systems/ tools;  
Links to software; Relationships and culture.

## ***Understanding of Requirements***

\* Documentation \*Eligibility; \*Funding

## ***Good Communication***

\* Meaningful and adequate; \* Easy  
\* Supported or impacted on by IM systems/ tools;  
Links to software; Relationships and culture

## ***Positive Relationships are:***

\* Inclusive of all relevant persons  
\* Meaningful, Respectful, Trust based  
\* Promoting of ongoing contact and connections.  
\* Consider understanding of cultures.

## ***Sustainability***

●View General Practices as a member of the inter agency system, not as outsiders  
●Ensure work is collaboratively driven & owned; focused & targeted; builds on existing work.
